

Capability Statement

If it's underground, it's under control

QLD Utility Locating are specialists in underground utility locating, leak detection and blocked drain clearing throughout Brisbane and the Sunshine Coast.

In addition to providing expert utility locating and leak detection, because of our trade background we can easily liaise with everyone involved in your site investigation.

A privately owned, family-run business, Qld Utility Locating is one of the few locating companies with the experience and trade qualifications to know what's going on underground. We work directly with site supervisors, local councils, architects,

engineers, tradespeople and homeowners alike to remedy issues on the work site, in the community, or in your backyard.

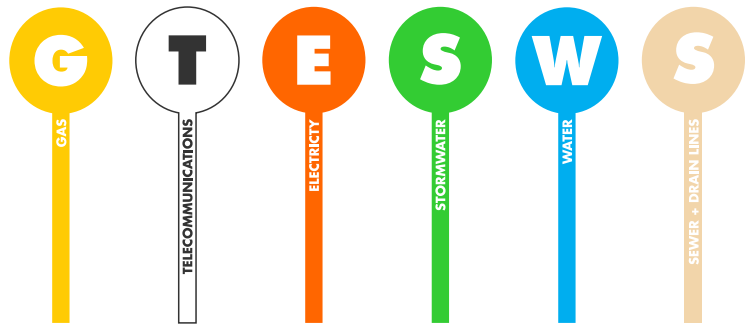

We offer 24-hour emergency service, and guarantee we'll be on site the day you contact us. From troubleshooting problem drains, to site investigation for multi-million-dollar projects, Qld Utility Locating is the trusted, expert team for your job.

Professionals we work alongside.

Builders. Renovators. Architects. Electricians. Plumbers.
Hydraulic Engineers. Commercial Businesses.
Engineering Practices. Environmental Companies.

Capabilities Areas of Expertise

Utility Locating

Qld Utility Locating can locate all service utilities. This assists with connection to utilities, confirms the location and depth of services, and helps avoid costly damage to utilities during excavation work. Unlike many locators, Qld Utility Locating can also locate plastic pipe conduits. Our investigation will include the use of service location equipment, CCTV cameras, Ground Penetrating Radar (GPR), poly locating equipment, and acoustic location equipment

We can locate the following utilities:

* metallic and non-metallic pipes

- ✓ Telstra
- ✓ Optus
- ✓ NBN
- ✓ Electrical
- ✓ Gas *
- ✓ Water mains *
- ✓ Fire service mains *
- ✓ Drains
- ✓ Sewer drains

Storm Damage

Flooding and storms can cause damage to infrastructure, as well as inconvenient pipe blockages. Qld Utility Locating can promptly locate breakages and leaks caused by pipe movement and clear drains with our high-pressure Jet Rodder. We also use sophisticated CCTV pipeline cameras to locate drain problems, allowing us to discover the source of any blockages and clear them faster.

Leak Detection

Our comprehensive leak detection service for homes, business and government is second-to-none. We use CCTV and location services to remove the guess work, helping us find leaks quickly and allowing us to determine who is responsible for repairs.

Qld Utility Locating uses an extensive range of methods to locate even the most difficult to find leaks, including acoustic leak detection equipment and foaming gas or hydrogen detectors. Once we have pinpointed the leak, we can provide expert advice on the best course of action and recommend the appropriate service or trade to carry out repairs.

Blocked Drains

Blocked drains are no match for our state-of-the-art, hydro-jet blasting technology. Our Jet Rodder can clear even the most difficult blocked drains and pipes, using high water pressure to flush debris and build-up away, rather than moving it further into your plumbing system. This is a long-term solution, reducing the chance of the blockage recurring.

Where necessary, we also use CCTV pipeline video or drain camera inspection to find and determine the cause of a blockage. We can provide clients with footage and a written report, which can be valuable for building applications, and save time and money on projects.

We specialise in Ground Penetrating Radar

Our expert technicians are certified in the use of ground-penetrating radar (GPR). This technology not only detects utilities, but also underground structures, soil, rock, water sources, underground voids and cracks. This means your team will be

better informed about what lies underground, allowing you to make clearer and more cost-effective decisions. This information can help you avoid frustrating construction delays and unexpected project costs.

Who we work with
